## Home Visits

### Home Visit (No Charge)

- No additional charges for home visits during regular hours (**Monday–Friday, 8:00 AM – 5:29 PM**), aside from the costs of services provided during the appointment.

### Weekend Home Visit (+\$400)

- A \$400 weekend fee applies to any home visits scheduled on **Saturdays or Sundays**.

### After-Hours Home Visit (+\$250)

- A \$250 after-hours fee applies to home visits scheduled between **5:30 PM – 8:59 PM** on weekdays.

### Late-Night Home Visit (+\$600)

- A \$600 late-night fee applies to home visits scheduled between **9:00 PM – 7:59 AM** on weeknights.

### Extended Range ZIP Codes & Travel Fee (+\$100)

- The ZIP codes with an extended range fee of \$100 include 85140, 85142, 85298, 85143, 85144, 85132 (Queen Creek and San Tan Valley), 85027, 85083, 85085, 85086 (Northern Phoenix, north of Pinnacle Peak Road), 85377 (Carefree), 85086 (Anthem), 85323 (Avondale), 85326 (Buckeye), 85338 (Goodyear), 85340 (Litchfield Park), 85354 (Tonopah), 85355 (Waddell), 85375, 85376 (Sun City West), 85378, 85373 (Sun City), 85379, 85387 (Surprise), 85392 (Avondale), 85396 (Buckeye), 85335 (El Mirage), 85083, 85085, 85027, 85323, 85326, 85338 (Northern and Far West Phoenix), 85326, 85396, 85338, 85340 (Buckeye and Goodyear), 85379, 85387 (Surprise), 85255, 85262, 85266 (Northern Scottsdale), 85339 (Laveen), 85218 (Gold Canyon), 85273 (Superior), and 85263 (Rio Verde).
- An extended range fee applies to patients in these areas to cover additional time, distance, and travel costs. If you're unsure whether your area falls under the extended range or if you need clarification on any fees, please contact us.
- Visits further outside of city limits are handled on a case-by-case basis, depending on the distance, time, and availability. Please contact us to discuss your specific situation.

## Service Add-Ons

In addition to the home visit, the following services are available:

### Medical Visit (+\$300)

- Includes a detailed consultation, physical examination, treatment plan, and any necessary prescription writing or lab ordering.

---

**Intravenous / Intramuscular Therapies**

- Pricing varies by therapy type.
- Certain therapies require a prior medical visit to assess safety and eligibility.
- *For detailed IV/IM therapy pricing, please refer to the Intravenous Therapy Menu.*

---

**Telemedicine****Telemedicine Visit (Unestablished Patient) – \$300**

- A Telemedicine Unestablished Patient Appointment includes taking a detailed medical history, reviewing previous medical records/labs/imaging, evaluating medications, and providing the patient with a comprehensive integrative treatment plan.

**Telemedicine Follow-Up (Established Patient) – \$200**

- A Telemedicine Follow-Up Appointment involves discussing any changes in health history since the previous visit, reviewing recent lab results, assessing health progress, and updating the treatment plan.

**15-Minute Consult (Unestablished Patient) – Free**

- A 15-minute consultation for unestablished patients to virtually meet the physician and determine if they would like to establish care. Please note, this consultation is not intended for specific medical advice, treatment recommendations, or diagnosis. Providing specific medical advice without a full evaluation can pose risks to patient safety and is prohibited due to licensing regulations. If you have medical concerns, a full medical visit will be required to assess your condition.

---

**Establishment Status**

- Patients are considered “established” for up to 1 year from their last visit. After 1 year without a visit, the patient will be considered “unestablished” and will need a new consultation to re-establish care. This is because health status can change over time, and it’s important to reassess a patient’s condition to ensure appropriate care.

---

**Non-Visit Interaction Charges****E-mail/SMS Correspondence Initiated by Patient (Established Patient) – \$75**

- This charge covers the physician’s time and expertise in reviewing the patient’s query, evaluating any relevant medical history or documents, and providing a comprehensive response. This includes one complete response via email or SMS.
- *Note:* In some cases, a medical visit may be necessary for a full evaluation or to address specific medical concerns. If so, this fee will not be charged, and a medical visit will be scheduled instead.

**Paperwork on Behalf of the Patient (Established Patient) – 30 minutes, \$75**

- This charge covers the physician's expertise and time for completing necessary forms for the patient, such as school forms, camp forms, sports participation forms, disability forms, FMLA forms, life insurance forms, patient assistance program paperwork, and referral letters.
- *Note:* In some instances, a medical visit may be required to properly evaluate the patient's condition before completing certain forms. If so, this fee will not be charged, and a medical visit will be scheduled instead.

**Refills or Prescription Changes Handled Outside of a Visit (Established Patient) – \$75**

- This charge covers the physician's time for creating a medical encounter, filling out a prescription form, and coordinating with the pharmacy to process refills or medication changes outside of a visit.
- *Note:* If the medication is a controlled substance or writing the prescription without a medical assessment could bring undue legal strain to our medical license, a medical visit will be required. In such cases, this fee will not be charged, and a medical visit will be scheduled instead.

**Imaging or Lab Order Handled Outside of a Visit (Established Patient) – \$75**

- This charge covers the physician's expertise in creating a medical encounter, completing lab/imaging orders, and coordinating with the lab or imaging center to ensure the correct tests are ordered based on the patient's medical needs.
- *Note:* This fee does not cover the cost of the lab tests or imaging services themselves, as those will be billed separately by our office for labs or by the imaging center for imaging. A medical visit may be required to ensure accurate orders based on your condition.

### Intravenous Therapies

IV therapy involves the administration of fluids, medications, or nutrients directly into the bloodstream through a vein. It is commonly used for hydration, delivering medications, replenishing vitamins and minerals, or providing targeted treatments for various conditions. This method allows for faster absorption and more immediate effects compared to oral intake. Certain nutrients have rate limits, meaning they must be infused slowly to ensure effectiveness and avoid potential side effects or complications. As such, most IVs need to be infused over the stated time frames.

**Age Restrictions and Parental Consent:**

- Intravenous (IV) therapies are generally offered for adults and children 12 years and older.
- For minors under 18, parental consent is required, and a parent must be present for the duration of the infusion.
- In the case of legally separated or divorced parents, both parents must provide consent for the treatment.

**Medical Restrictions:**

- IV therapy may not be suitable for individuals with certain medical conditions, such as severe cardiovascular or kidney diseases, compromised immune systems, or allergic reactions to the specific substances used in the treatment.
- A thorough medical evaluation is required before IV therapy for patients with chronic conditions or complex health histories.
- Patients must inform the physician of any known allergies, chronic conditions, or medications being taken prior to receiving IV therapy.

- For patients with active cancer, co-management with an oncologist is required to ensure the therapy is appropriate and safe within the context of cancer treatment.

## Intravenous Therapeutic Formulations

These therapies may be administered based on a patient's request without requiring a prescription. However, certain treatments may still require a prior medical visit or specific lab work to assess safety and effectiveness.

### Replenish (500mL) [CPT: 96365; 96366]

- Description:
  - The Replenish 500cc IV is a powerful blend of essential vitamins, minerals, and antioxidants designed to restore and replenish your body's vital nutrients. It contains **Vitamin C** for immune support and collagen production, **Taurine** for cardiovascular health and detoxification, and a **B Complex** (including **Methyl and Hydroxy B12**, **Pyridoxine (B6)**, **Thiamine (B1)**) to enhance energy, metabolism, and brain function. **Dexpantenol (B5)** supports metabolism and skin health, while **Zinc** boosts immune function and cellular repair. **N-Acetyl Cysteine (NAC)** promotes detoxification and respiratory health, **Selenium** supports thyroid function and acts as an antioxidant, and **Magnesium** is vital for muscle, nerve, and bone health. This infusion is designed to enhance energy, improve immune function, support mental clarity, and promote overall wellness.
  - This infusion is typically administered over 60 min over a period of time to ensure optimal absorption and effectiveness.
- Pricing:
  - 500mL—\$250

### Replenish & Rehydrate IV (1000mL) [CPT: 96365; 96366] (\$340)

- Description:
  - The Replenish & Rehydrate IV is an advanced infusion designed to provide a more comprehensive boost of essential vitamins, minerals, and electrolytes. It contains an enhanced blend of **Vitamin C**, **Taurine**, **B Complex** (including **Methyl and Hydroxy B12**, **Pyridoxine (B6)**, **Thiamine (B1)**), **Dexpantenol (B5)**, **Zinc**, **N-Acetyl Cysteine (NAC)**, **Selenium**, and **Magnesium** for energy, immune support, detoxification, and overall wellness. This version also includes **Lactated Ringer's solution**, which provides essential electrolytes like sodium, potassium, and calcium to help improve hydration and support the body's fluid balance, making it ideal for rehydration and recovery. The combination of these ingredients in Lactated Ringer's solution helps restore your body's nutrients, while also replenishing essential hydration. This infusion is typically administered over 75 minutes to ensure proper absorption and effectiveness, delivering enhanced energy, immune support, hydration, and overall vitality.
  - For patients who are pregnant or planning to become pregnant, we offer pregnancy-friendly options. These modifications remove certain ingredients (such as NAC) and reduce dosages of others, like Vitamin C, that may not be recommended during pregnancy. Instead, we focus on a gentler, safe combination of fluids, electrolytes, and essential vitamins."
- Pricing:
  - 1000mL—\$340

### Acute Immunity IV (with 12.5 grams of Vitamin C) [CPT: 96365; 96366]

- Description

- Reserved for those battling an acute viral illness. IV contains the following the maximum amount of Vitamin C allowable before lab testing is required. The IV is further bolstered with Lysine to inhibit viral replication, Zinc and Magnesium for immune support, B vitamins and B12 for energy. IV is delivered and administered at your home by a physician. IV takes up to 75 minutes to drip.
- Pricing
  - 500mL—\$250

**MOAB (Mother of all bags) (1000mL) [CPT: 96365; 96366]**

- Description:
  - The **MOAB (Mother of All Bags) IV** is a potent infusion designed for acute immune support and rapid recovery. This advanced formula contains all the nutrients found in our **Replenish & Rehydrate IV**, including **Vitamin C**, **Taurine**, **B Complex** (including **Methyl and Hydroxy B12**, **Pyridoxine (B6)**, **Thiamine (B1)**), **Dexpantenol (B5)**, **Zinc**, **N-Acetyl Cysteine (NAC)**, **Selenium**, and **Magnesium**, along with **Lactated Ringer's solution** for optimal hydration. In addition, it provides **12.5 grams of Vitamin C**, a powerhouse antioxidant known for its role in bolstering immune defense and reducing inflammation. To further enhance immune function, **L-Lysine** is added for its antiviral properties, helping to strengthen the body's ability to fight off viral infections. This infusion is ideal for patients looking for rapid immune system support during times of illness, stress, or infection. The **MOAB IV** is administered over 90 minutes to ensure the nutrients are absorbed effectively, providing immediate relief and promoting a faster recovery.
- Pricing:
  - 1000ml—\$360

**Nutrient Boost IV (250ml) [CPT: 96365; 96366] (\$200)**

- Description:
  - For a quick pick-me-up, our **Nutrient Boost IV** delivers a powerful blend of essential vitamins and minerals in a compact 250ml infusion. This revitalizing drip combines **Vitamin C**, **Magnesium**, **Zinc**, a full spectrum of **B vitamins**, and concentrated **B12** to quickly replenish vital nutrients and provide an immediate energy lift. **Zinc** helps support immune function and cellular repair, making this infusion an excellent choice for those feeling run down. Ideal for those seeking a light, fast-acting boost, this IV is designed to restore balance and vitality when you're feeling drained or need to recharge. Administered directly to your door in just **40 minutes**, it's the perfect option for those on the go—but for more comprehensive, long-lasting support, we recommend exploring our larger, more potent IVs for deeper hydration, immunity, and wellness benefits.
- Pricing
  - 250mL—\$200

[Intravenous Add-on menu](#)**[Add-on] Glutathione (GSH) Detox Intravenous Push [CPT: 96368]**

- Description:
  - **Glutathione**, often referred to as the “master antioxidant,” is a powerful detoxifier that supports liver function, reduces oxidative stress, and enhances immune health. Think of the original IV bag as the “Army”—effective, steady, and foundational. The **Glutathione push**, however, is the “Marine”—strong, fast-acting, and specialized. It's administered as a **syringe push** into the **empty IV bag** after the initial infusion to provide a concentrated,

targeted boost. Due to its potency, it's not mixed into the original infusion but added at the end for maximum impact. This treatment enhances detoxification, skin health, and immune function.

- **Dosing/Pricing**

- **Recommended Dosage:** The dosage is tailored to the patient's size, symptom severity, and overall health history and vitality. The physician will assess these factors to determine the appropriate amount for your needs.
  - 600mg—Gentle detox \$30
  - 800mg—Moderate detox \$40
  - 1000mg—Acute dosage \$50 —most common dose when feeling sick
  - 1200mg —Acute dosage (Rx Only) \$60
  - 1400mg—Acute dosage (Rx Only) \$70
  - 1600mg+ —Acute dosage (Rx Only) variable

**[Add-on] Intravenous Cardiometabolic Recharge (Rx Only)**

- **Description:**
  - Enhance your IV therapy with an additional 1,000 mcg of Methyl/Hydroxy B12 and 2,000 mg of L-Carnitine, available as an add-on to our Replenish, Replenish + Rehydrate, Acute Immunity, and MOAB IV formulations.
    - L-Carnitine plays a critical role in myocardial energy production, transporting fatty acids into mitochondria to generate ATP. Research suggests that L-Carnitine supplementation may improve exercise tolerance, reduce cardiac workload, and enhance left ventricular function in patients with congestive heart failure (CHF).
    - As this treatment can support heart and metabolic function, a thorough evaluation is needed to ensure it aligns with your individual health needs. Your healthcare provider will assess your specific condition to confirm it is safe and beneficial for you.
- **Requirements:**
  - (Rx Only) – Available for established patients.
- **Pricing**
  - +\$100

**[Add-on] Plenamine IV Amino Acid Therapy 250cc (\$120) (should be \$150)**

- **Description:**
  - Plenamine IV Amino Acid Therapy delivers a potent blend of essential and non-essential amino acids directly into the bloodstream to support muscle recovery, metabolic function, and overall health. This intravenous infusion helps replenish amino acids that may be depleted due to stress, illness, or intense physical activity.
    - Amino acids are the building blocks of proteins and play a crucial role in tissue repair, immune function, and enzyme production. By providing these vital nutrients intravenously, Plenamine IV ensures optimal absorption, promoting faster recovery, improved energy levels, and enhanced muscle function. It can also support detoxification, enhance protein synthesis, and improve overall bodily function.
    - Additionally, Plenamine IV can be used to help **prevent cachexia**, a condition characterized by severe muscle wasting often seen in chronic illnesses, by supporting muscle preservation and overall nutritional balance.

- This therapy is ideal for individuals looking to support their nutritional needs, improve recovery from injury or surgery, or enhance athletic performance.
- Pricing:
  - 250ml—\$150

## Special IV Formulations

### Major Auto-Hemotherapy (MAH) also known as Ozone IV

- Description:
  - Major Auto-Hemotherapy (MAH) is a therapeutic treatment in which medical-grade ozone gas is introduced into a sample of the patient's blood. The ozone mixes with the blood, producing hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>), which acts as a powerful oxidant. This reaction enhances the body's immune system, improves oxygen utilization, reduces inflammation, and supports detoxification.
  - After the blood is ozonated, it is reinfused intravenously back into the patient, helping to stimulate natural healing processes. Additionally, the process triggers an increase in the production of **glutathione**, a key antioxidant that protects cells from oxidative stress, supports detoxification, and boosts the body's defense mechanisms. This combination of effects helps improve overall health, immune function, and recovery.
- Requirements:
  - A **CBC with differential** and **CMP** within 90 days of the scheduled infusion.
  - The patient must be an **established patient**.
  - **G6PD** blood test results must be on file within the last 24 months.
- Pricing
  - 250cc (Rx Only) \$250
  - 500cc (Rx Only) \$320

### Intravenous NAD+ Therapy (Rx Only)

- Description:
  - Nicotinamide-Adenine-Dinucleotide (NAD+) is a vital coenzyme found in every cell of the body, playing a critical role in cellular energy production, metabolism, and overall function. NAD+ therapy involves intravenous administration to efficiently replenish depleted levels, bypassing the digestive system for faster absorption and more immediate cellular restoration. This treatment is used to enhance physical and mental performance, support healthy aging, promote recovery from various health conditions, and improve energy levels and cognitive function. As we age, NAD+ levels naturally decline, leading to slower recovery, increased fatigue, and reduced cellular energy. By replenishing NAD+ through an IV, the body benefits from enhanced DNA repair, improved detoxification, and better mitochondrial function. This therapy is especially beneficial for those with chronic fatigue, fibromyalgia, drug addiction, or anyone seeking to combat the effects of aging.
- Dosing/Pricing
  - 100mg NAD+ \$400
  - 250mg NAD+ \$600
  - 500mg NAD+ \$800 (Rx Only)
  - 1000mg NAD+ \$1,200 (Rx Only)

- 5-day “Drug of Abuse” Withdrawal/Detox Protocol \$7,200 (Rx Only)

## Iron Infusion (Venofer) IV (Rx Only)

- Description:
  - An intravenous iron infusion designed to treat iron deficiency when oral supplements are ineffective or not tolerated. Venofer IV delivers a direct, highly absorbable form of iron to quickly replenish iron levels, improving symptoms like fatigue, weakness, and anemia. This treatment is ideal for patients with significant iron depletion or those who cannot take oral iron supplements due to gastrointestinal issues. Administered under medical supervision with a prescription.
- Requirements:
  - A prescription from an Elixir Clinic physician is required. Additionally, an **Iron Panel, CBC with Differential, and CMP** must be on file, dated within 90 days of the scheduled infusion.
  - Patients are required to establish care with an Elixir Clinic physician prior to receiving the IV infusion. This ensures a comprehensive evaluation and appropriate management of your iron deficiency.
- Dosing/Pricing:
  - 100mg—\$600
  - 200mg—\$800

## Intravenous Heavy Metal Chelation (Rx Only)

- Description:
  - This triple bag IV therapy for heavy metal chelation includes Calcium-EDTA, followed by DMPS, and concludes with Glutathione. The treatment is customized based on the patient’s weight, kidney function, and specific heavy metal body burden.
- Requirements
  - To qualify for this therapy, patients are required to establish care and provide documented heavy metal toxicity through a **Urinary Toxic Metal Screening (UTM)**, along with recent **CBC w/Diff, CMP, and Urinalysis** lab results. The physician will review your case to determine the appropriate course of treatment and cost based on your individual needs.
  - Patients over the age of 40 will need a DEXA Scan and NTx Urinary Test (N-Telopeptide) to determine if their bones are healthy enough to take the stress of chelation therapy.
- Dosing/Pricing
  - Variable (~\$400-600)
    - Pricing variable based on patient weight and the specific heavy metal toxin to be chelated

## High Dose Vitamin C IV (HDIVC) [CPT: 96365; 96366; 96366] (Rx Only)

- Description:
  - High Dose Vitamin C IV therapy involves the administration of 25-100 grams of Vitamin C per infusion. This powerful therapy is often used as an adjunctive treatment in cancer care, with favorable research supporting its benefits when combined with standard oncological treatments. It can also be used to treat occult viral infections,

such as Epstein-Barr virus, and other documented cases of infection. The IV takes 1.5 to 3 hours to infuse and includes essential minerals like sodium chloride, potassium chloride, magnesium chloride, and calcium chloride to support hydration and balance electrolytes.

- The specific dose of Vitamin C is determined based on the patient's weight, cancer body burden, and kidney function.
- Requirements:
  - A recent CMP (within 90 days of infusion) and a G6PD test (within 24 months of infusion) are required for safe administration. If utilizing HDIVC as part of cancer treatment, additional paperwork is required.
- Dosing/Pricing
  - 12.5g Vitamin C – 60min – \$250.00
  - 25g Vitamin C – 75min – \$300.00
  - 30g Vitamin C – 75min – \$330.00
  - 40g Vitamin C – 90min – \$360.00
  - 50g Vitamin C – 90 minutes – \$400.00 (Most Common Dosage for Anti-Cancer & Anti-EBV in an average-sized adult)
  - 75g Vitamin C – 120 minute– \$450.00
  - 100g Vitamin C – 150 minutes – \$500.00

## Intravenous Artesunate (Artemisinin) 250cc Bag (Rx Only)

- Description:
  - Intravenous Artesunate is a pharmaceutical-grade formulation derived from *Artemisia annua*, known for its potential in integrative oncology. This 250ml intravenous solution delivers Artesunate directly into the bloodstream for optimal absorption and therapeutic effect.
  - Artesunate has been studied for its ability to selectively target cancer cells, inhibit tumor growth, and induce apoptosis while sparing healthy tissue. It may also enhance the efficacy of conventional treatments like chemotherapy and radiation, helping to improve patient outcomes. Additionally, it has been noted for its potential to reduce side effects associated with cancer therapies, supporting overall well-being during treatment.
- Requirements
  - **Note:** A test dose is required before the first ever full administration.
  - **Compatibility:** Artesunate can be administered alongside **either** high-dose Vitamin C (oxidative therapy) or phytonutrient IVs such as Resveratrol or EGCG, but not both in the same session. To ensure proper sequencing, Artesunate should be given **alone, with high-dose Vitamin C, or on a separate day dedicated to phytonutrients.**
- Pricing
  - 60mg (Test Dosage) – 30 mins – \$225.00
  - 120mg – 30 mins – \$300.00
  - 240mg – 30 mins – \$400.00

## EGCG IV Therapy: Support for Cancer Patients (Rx Only)

- Description:
  - **Epigallocatechin Gallate (EGCG)** is a compound considered a flavonoid found in green tea that has shown potential in cancer prevention and treatment. When administered intravenously, EGCG offers a range of benefits for cancer patients. It can help enhance immune function, reduce inflammation, and support cellular health. Additionally, EGCG may reduce the resistance of cancer cells to chemotherapy drugs, induce apoptosis (programmed cell death) in cancer cells, and regulate key cell signaling pathways involved in cell proliferation, angiogenesis (formation of new blood vessels), and apoptosis. EGCG may also inhibit the process of carcinogenesis, including the initiation, promotion, and progression of cancer. Early studies suggest EGCG could be effective for treating various types of

cancer, including lung, breast, and colorectal cancer. As a non-invasive therapy, EGCG IV treatment complements traditional cancer therapies, supporting overall health and enhancing the body's natural healing process.

- EGCG can generally be given alongside nutrient IVs and other phytonutrient/chemicals, such as artemisinin and resveratrol. However, it is **not** typically recommended on the same day as oxidative therapies like ozone, high-dose vitamin C (HDIVC), or traditional chemotherapy. Your lead oncologist will ultimately determine the appropriate combinations and frequency of administration.
- Requirements
  - **Precaution:** EGCG IV should not be administered within 24 hours of a chemotherapy infusion unless specified otherwise by the overseeing oncologist.
- Pricing
  - 500mg—\$825

## Resveratrol IV (Rx Only)

- Description:
  - Resveratrol IV therapy delivers a **high-dose infusion of this powerful polyphenol** directly into your bloodstream, ensuring **maximum absorption and bioavailability**. Known for its **anti-aging, anti-inflammatory, and cardiovascular benefits**, resveratrol also plays a promising role in **cancer support therapies** due to its ability to **target abnormal cell growth and enhance cellular resilience**.
  - Emerging research indicates that **resveratrol has anti-cancer properties**, potentially working by:
    - **Inhibiting tumor growth** through its effects on cell signaling pathways.
    - **Enhancing chemotherapy and radiation sensitivity** in certain cancer types.
    - **Reducing inflammation and oxidative stress**, both of which contribute to cancer progression.
    - **Supporting immune function** to help the body fight abnormal cells.
- Requirements
  - **Compatibility:** Resveratrol IV can be administered in the same session as **EGCG, nutrient IVs, and Artesunate**, but it **should not** be combined with **high-dose Vitamin C or ozone therapy** in the same sitting.
  - **Precaution:** Resveratrol IV should not be administered within 24 hours of a chemotherapy infusion unless specified otherwise by the overseeing oncologist.
- Pricing
  - 250mg—\$400
  - 500mg—\$600

*Note: All Intravenous therapies are mixed within 45 minutes of administration in an ISO-5 Laminar Flow Hood within an ISO-7 environment to ensure USP Compliance.*

## Intramuscular Injections

### Methylated-B12 Energy Booster Shot [CPT: 96372] \$30

- Description:

- Boost your energy, mood, and cognitive function with a quick, powerful injection of methylated (active) vitamin B12. This bioavailable form of B12 is essential for red blood cell production, nervous system support, and cellular energy metabolism. Ideal for individuals with B12 deficiency, fatigue, or difficulty absorbing B12 from food or supplements. Our intramuscular shot ensures rapid absorption.
- Pricing
  - 2000mcg—\$30

## Vitamin D3 (Cholecalciferol) Intramuscular Injection [CPT: 96372]

- Description:
  - Vitamin D is a vital fat-soluble vitamin that plays a crucial role in overall health. It helps regulate calcium and phosphorus for bone health, supports immune function, reduces inflammation, and aids in the prevention of autoimmune disorders. Vitamin D also supports muscle strength, cognitive function, cardiovascular health, and regulates insulin sensitivity. It is important for thyroid and endocrine function, neuroprotection, and detoxification. Additionally, it plays a key role in reproductive health and fetal development. This injection is used to quickly correct chronic or acute vitamin D deficiencies, promoting overall vitality and immune function.
- Pricing
  - 25,000IU—\$30
  - 50,000IU—\$40

## Nebulization

### Nebulized Glutathione Treatment (Add-on) \$30

- Description:
  - Administration of glutathione (GSH) directly to the alveolar surface of the lungs via nebulization for the intended purpose of reducing oxidative stress and damage to the lung parenchyma, while concurrently cleaving mucus to make a dry cough more productive.
- Pricing:
  - 1 Treatment—\$30
  - Dispense GSH for home use: \$12 per syringe
    - Requires personal nebulizer device or a prescription written for one to get from a pharmacy

## Ozone Applications

### Ozone Sinus Insufflation

- Description:
  - Ozone sinus insufflation is a gentle, non-invasive therapy that introduces medical-grade ozone gas into the nasal passages to help clear sinus infections, reduce inflammation, and support overall sinus and respiratory health. The ozone works by neutralizing bacteria, viruses, fungi, and biofilms that can contribute to chronic sinus congestion, infections, or allergies.
  - During the treatment, a carefully controlled amount of ozone gas is delivered through a specialized device or catheter into the sinuses, typically while the patient breathes normally. This therapy helps to improve oxygenation, reduce microbial load, and promote tissue healing without the use of systemic antibiotics.
  - Ozone sinus insufflation is often used for patients with chronic sinusitis, recurrent sinus infections, seasonal allergies, or post-viral congestion.
- Price:
  - \$30

### Ozone Ear Insufflation

- **Description:**
  - Ozone ear insufflation is a safe, non-invasive therapy where medical-grade ozone gas is gently introduced into the ear canal to help reduce infections, inflammation, and support overall ear, sinus, and neurological health. The ozone works by penetrating the eustachian tubes, sinuses, and even deeper tissues, helping to eliminate bacteria, viruses, and fungi while improving oxygen delivery to surrounding areas. This treatment is often used for conditions such as ear infections, sinusitis, upper respiratory infections, brain fog, tinnitus, and even to support neurological wellness.
  - During the procedure, a low concentration of ozone gas is carefully delivered into the ear canal using a specialized attachment while the patient rests comfortably. The treatment is quick, painless, and offers a natural way to stimulate healing and immune function.
- **Price:**
  - 15 minutes— \$30

## Ozone Wound Insufflation

- **Description:**
  - Ozone wound insufflation is a therapeutic technique that uses medical-grade ozone gas to promote rapid wound healing, fight infection, and reduce inflammation. In this procedure, ozone gas is gently applied over the wound, typically within a sealed environment like a specialized bag or dome, allowing the ozone to directly contact the affected tissue without entering the bloodstream. Ozone's powerful antimicrobial properties help eliminate bacteria, viruses, and fungi, making it highly effective for treating chronic wounds, infected wounds, burns, ulcers, and post-surgical sites. Additionally, ozone stimulates oxygenation, improves circulation, and supports tissue regeneration, accelerating the body's natural healing process.
  - This treatment is safe, non-invasive, and especially beneficial for patients with wounds that are slow to heal or resistant to conventional therapies.
- **Price:**
  - \$50

## Ozonated Water for Gargling and Topical Application (550mL)

- **Description:**
  - Ozonated water is purified water that has been infused with medical-grade ozone gas, creating a powerful, natural antimicrobial solution. When used for gargling, ozonated water can help reduce oral bacteria, soothe sore throats, support gum health, and promote overall oral hygiene. It is especially helpful for addressing infections, inflammation, and promoting faster recovery after dental procedures.
  - When applied topically, ozonated water acts as a gentle yet highly effective disinfectant for wounds, cuts, burns, and skin irritations. It promotes tissue oxygenation, accelerates healing, reduces inflammation, and helps prevent infection without the harshness of chemical antiseptics.
  - Safe, non-toxic, and easy to use, ozonated water offers a natural way to support healing both inside the mouth and on the skin.
- **Price:**
  - \$30

## Laboratory Testing

- **Laboratory testing draw free (\$120)**
  - **Description:**
    - Cost to have the physician come and collect samples for laboratory testing. Price does not include the cost of the labs themselves. We can provide estimates on total cost dependent on what tests need to be run.
  - **Price**
